

Draft-taylor-mmusic-sdp-tdm-00.txt

- **Primary purpose: provide bearer capabilities for NAS operation (Megaco)**
- **Happens also to allow general TDM characterization by SIP, Megaco, MGCP**
- **Provides the following:**
 - **new nettype (TDM), addrtype (GRP, NUL) conventions**
 - **media format mappings**
 - **requires registration of new subtypes**
 - **new protocols on m= line: TDM, PKT/TDM, FRM/TDM**
 - **new attributes: spchonly, 56kmax, chnls:<list>, netprof:<profile>, e2eprof:<profile>, userbw:<bits>, ibneg, v110parms:<parms>, v120parms:<parms>, asynch:<parms>, modem:<modem>**

Potential Issues

- **Naming conventions: acceptable?**
- **Media type registration: is the draft the right place to put the templates?**
- **Port is irrelevant for TDM. Is "set to 0" the right treatment?**
- **New protocols OK? No formats defined -- rely on attributes.**
- **Attribute parameters contain "=", "/", ",", " OK?**
